Introduction to LLU Library Resources & Literature Searching

Shirley Rais, MLS, Associate Professor, University Libraries
Chair, Resource Management & Acquisitions Dept.

Heather Rodriguez-James, MLS, Associate Professor, University Libraries
Library Liaison to the School of Public Health
Reference Librarian, Research & Instruction Dept.
Agenda

- Be familiar with elements of the library website and know how to access key resources from on- and off-campus

- Learn how to find (and access) articles on a research topic by searching 2 primary databases: PubMed and CINAHL (an EBSCOhost database)
Library home page: library.llu.edu

Welcome to the Del E. Webb Memorial Library, serving the information needs of the students, staff, and faculty of Loma Linda University Health.

Search the LLU Libraries for print and electronic books, journals and databases.

Finding Health Statistics: Getting Started

The purpose of this guide is to provide a starting point for locating health statistics, primarily in North America. It includes selected resources on health statistics available through the Internet or at the Loma Linda University.

### Tutorials
- Finding and Using Health Statistics
  This course describes the range of available health statistics, identifies their sources and helps you understand how to use information about their structure as you search.

- MS-INFO (Michigan Informatics Tutorials)
  This tutorial will identify the types of statistics and data sets that are available on the Internet and help you create an effective search strategy for locating needed statistics.

- Public Health Information & Data Tutorial
  Tutorial providing instruction for public health workers and students on finding statistics and other information resources. Excellent tutorials on Health Statistics & Data Sets and Evidence-Based Public Health.

- UNC-Chapel Hill
  ... ... ...

### Statistical Sources
- **America's Health Rankings**
  America's Health Rankings is a yearly assessment of the relative healthiness of the nation, based upon analysis of comprehensive determining factors such as personal behaviors, the environment in which people live and work, the decisions made by public and elected officials and the quality of medical care delivered by health professionals.

- **American Fact Finder**
  An online source for population, housing, economic and geographic data that presents the results from four key data programs - Census of Housing and Population, Economic Census, Americans Community Survey, and Population Estimates Program.

- **CDC Wonder - Information and Communication**
  Developed by the Centers for Disease Control and Prevention (CDC), it is an integrated information and communication system for public health.

- **DHHS Data Council**
  This web-based tool brings together key health and human services data and statistics. It is designed to complement other government resources such as FirstGov and FedStats. The Gateway covers federal, state and local government sponsored information.

- **FedStats**
  Provides access to the full range of official statistical information produced by the Federal Government. Data and trend information on such topics as economic and population trends, crime, education, health care, and more.

- **Global Health Facts**
  Global data on HIV/AIDS, malaria, TB and other key health and socio-economic indicators. The data are displayed in tables, charts, and color-coded maps and can be downloaded for custom analysis.

- **Healthy People 2010**
  An interactive database system developed by staff of the Division of Health Promotion Statistics at...

Secondary data sources for public health by Sarah Boslaugh
ISBN: 9780521670016

Evidence-based Public Health by Browson, Ross C.
ISBN: 0195143760
Publication Date: 2003

Monitoring the health of populations: statistical principles and methods for public health surveillance by edited by Ron Brookmeyer,

Donna F. Stroup
ISBN: 019514482

Excellent Sources of Public Health Secondary Data

- Health Data Tools and Statistics
  This data portal was created by the collaboration of U.S. government agencies, public health organizations and health sciences libraries and provides links to health statistics and data sets as well as resources to support data collection.

  These are popular data sources for Public Health researchers, but please see the rest of this library guide for more sources.

- National Health and Nutrition Examination Survey (NHANES)
  NHANES is a program of studies designed to assess the health and nutritional status of adults and children in the United States. The survey is unique in that it combines interviews and physical examinations.

- National Health Interview Survey (NHIS)
  NHIS data on a broad range of health topics are collected through personal household interviews. Survey results have been instrumental in providing data to track health status, health care access, and progress toward achieving national health objectives.

- US Census Bureau

Finding & Evaluating Secondary Data Sources

- Public Health Information & Data Tutorial
  Tutorial providing instruction for public health workers and students on finding statistics and other information resources. Excellent tutorials on Health Statistics & Data Sets and Evidence-Based Public Health.

  These links are supplemental resources to aid in the selection, use, & evaluation of secondary data for public health research.

State and County Level Information Sources

- Area Resource File (ARF)
  ARF is a database containing more than 6,000 variables for each of the nation’s counties.

- Selected list of popular data sources from state and local governments.

- County Health Rankings
  This web site provides access to the 50 state reports, ranking each county within the 50 states according to its health outcomes and the multiple health factors that determine a county’s health.

- SLAITS: State and Local Area Integrated Telephone Survey
  Provides in-depth State and local area data to meet various program and policy needs in an ever-changing health care system.

- Statehealthfacts.org
  Statehealthfacts.org is designed to provide free, up-to-date, and easy-to-use health data on all 50 states. Statehealthfacts.org provides data on more than 700 health topics.

National Institutes of Health Hematopoietic Cell Transplantation Late Effects Initiative: Consensus Recommendations for Subsequent Neoplasms.

Abstract

Subsequent neoplasms (SN) following hematopoietic cell transplantation (HCT) cause significant patient morbidity and mortality. Risks for specific SN types vary substantially, with particularly elevated risks for post-transplant lymphoproliferative disorders, myelodysplastic syndrome/acute myeloid leukemia, and squamous cell malignancies. This consensus document provides an overview of the current state of knowledge regarding SN after HCT and recommends priorities and approaches to overcome challenges and gaps in understanding. Numerous factors have been suggested to impact risk, including patient-related (e.g., age), primary disease-related (e.g., disease type, pre-HCT therapies), and HCT-related characteristics (e.g., type and intensity of conditioning regimen, stem cell source, development of graft-versus-host disease). However, gaps in understanding remain for each of these risk factors, particularly for patients receiving HCT in the current era due to substantial advances in clinical transplantation practices. Additionally, the influence of non-transplant-related risk factors (e.g., germline genetic susceptibility, oncogenic viruses, lifestyle factors) is poorly understood. Clarification of the magnitude of SN risks and identification of etiologic factors will require large-scale, long-term, systematic follow-up of HCT survivors with detailed clinical data. Most investigations of the mechanisms of SN pathogenesis after HCT have focused on immune drivers. Expansion of our understanding in this area will require interdisciplinary laboratory collaborations utilizing measures of immune function and availability of archival tissue from SN diagnoses. Consensus-based recommendations for optimal preventative, screening, and therapeutic approaches have been developed for certain SN after HCT, whereas for other SN, general population guidelines are recommended. Further evidence is needed to specifically tailor preventative, screening, and therapeutic guidelines for SN after HCT, particularly for unique patient populations. Accomplishment of this broad research agenda will require increased investment in systematic data collection with engagement from patients, clinicians, and interdisciplinary scientists in order to reduce the burden of SN in the rapidly growing population of HCT survivors.

Keywords: NIH consensus; hematopoietic cell transplantation; late effects; long-term follow-up; second malignancies; subsequent neoplasms

Get rights and content

High Priority Recommendations

• Conduct large-scale, long-term (>10 years), systematic follow-up of HCT recipients to better define the magnitude of risks for specific SN types, including both common and rarer tumors. The full spectrum of SN should be considered, including certain benign tumors (e.g., meningioma) as well as all types of cutaneous malignancies.
• Collect detailed patient and clinical data (e.g., primary disease, pre- and post-transplant therapies, donor source, GVHD type/severity/therapy, adherence to screening recommendations, exposure to key cancer risk factors such as tobacco) in a standardized format to investigate determinants of SN risks.

- **Academic Search Premier**
  - This multi-disciplinary database provides full text for more than 4,600 journals, including full text for nearly 3,000 peer-reviewed titles. PDF backfiles to 1975 or further are available for well over one hundred journals, and searchable cited references are provided for more than 1,000 titles.
  - [Title List][More Information]

- **CINAHL Plus with Full Text**
  - CINAHL Plus with Full Text is a robust collection of full text for nursing & allied health journals, providing full text for more than 770 journals indexed in CINAHL®. This authoritative file contains full text for many of the most used journals in the CINAHL® index, with no embargo. CINAHL Plus with Full Text is the core research tool for all areas of nursing and allied health literature. Full text coverage dates back to 1937.
  - [Title List][More Information]

- **Health Source: Nursing/Academic Edition**
  - This database provides nearly 550 scholarly full text journals focusing on many medical disciplines. Health Source: Nursing/Academic Edition also features the Lexi-PAT Drug Guide, which covers 1,300 generic drug patent education sheets with more than 4,700 brand names.
  - [Title List][More Information]

- **PsycINFO**
  - The PsycINFO® database, American Psychological Association’s (APA) renowned resource for abstracts of scholarly journal articles, book chapters, books, and dissertations, is the largest resource devoted to peer-reviewed literature in behavioral science and mental health. It contains over 1 million records and summaries dating as far back as the 1800s with one of the highest DOI matching rates in the publishing industry. Journal coverage, which spans from the 1800s to the present, includes international material selected from around 2,500 periodicals in dozens of languages.
  - [More Information]

- **PsycARTICLES®**
  - PsycARTICLES®, from the American Psychological Association (APA), is a definitive source of full text, peer-reviewed scholarly and scientific articles in psychology. It contains more than 153,000 articles from nearly 80 journals published by the American Psychological Association (APA), its imprint the Educational Publishing Foundation (EPF), and from allied organizations including the Canadian Psychological Association and the Hogrefe Publishing Group. It includes all journal articles, book reviews, letters to the editor, and errata from each journal. Coverage spans 1894 to the present and nearly all APA journals go back to Volume 1, Issue 1.

Library Links (choose up to three libraries):

- Loma Linda University Libraries - Find FullText @ LLUSMC
- Open WorldCat - Library Search
Steps in the Literature Search

1. Choose a topic
2. Search for potential references
3. Retrieve and save relevant citations and/or full text of relevant results
4. Check references in relevant articles for new potential references
5. Organize references
6. Analyze & Synthesize: integrate notes, references, etc.
7. Write your paper, lit review, etc.
Finding Articles on a Topic: Searching

- Construct a search strategy – think about what you hope to find.
- Evaluate which database is appropriate for your search. Start with the database list subject entry, Public Health (general) or other specific subjects.
- Conduct a search and look carefully at your results and then repeat search with a revised search strategy.
- Do you have access to the full text? Look for the purple Loma Linda buttons and click to search the Journal Portal.
Formulate a problem or question:

- What is known about obesity prevention programs? (vague)
- Do School-based nutrition programs influence children’s eating habits? (better)
- Be as precise as possible as to what you want to find (depends on your purpose)
  - Only current issues (programs in last 5 years)
  - Historic trends
  - International or US?
  - Certain populations? Disadvantaged youth, etc.
  - Specific age group? Pre-school, etc.
Planning Your Research Strategy

- **Database**
  - Select database appropriate for your subject
  - Library databases by Subject List

- **Search Terms**
  - What search terms will you use?
  - Synonyms: physical activity/exercise

- **Boolean**
  - Do you need to use AND or OR connectors? If so, how will you connect the terms?
## Choosing search terms

- Identify key words and concepts; create a search strategy.

<table>
<thead>
<tr>
<th>Concept or Key word</th>
<th>Synonyms/related concept</th>
</tr>
</thead>
<tbody>
<tr>
<td>Childhood obesity</td>
<td>overweight children; pediatric obesity</td>
</tr>
<tr>
<td>Nutrition</td>
<td>diet</td>
</tr>
<tr>
<td>Exercise</td>
<td>physical activity</td>
</tr>

<td>School-based</td>
<td>school health</td>
</tr>
<tr>
<td>Prevention</td>
<td></td>
</tr>
</tbody>
</table>
Combining terms: Boolean operators (AND, OR, NOT)

Text word vs. controlled vocabulary
Boolean searching

- **AND**
  - Narrows
  - Both terms must appear in item results
  - More terms = less results

- **OR**
  - Broadens
  - Either, or all terms may appear
  - More terms = more results

- **NOT**
  - Restricts search
  - Term must not appear in item results
How does the database combine terms? 3 different results:

1. **Obesity prevention exercise nutrition** (most databases will “AND” terms: obesity AND prevention AND exercise AND nutrition) (2,069 hits in PubMed)

2. **Obesity prevention** (exercise OR nutrition) (14,655 hits in PubMed)

3. **Obesity OR prevention OR exercise OR nutrition** (will get the most hits) (2,194,761 hits in PubMed)
PubMed Controlled Vocabulary: MeSH

- **Medical Subject Headings**
  - Thesaurus of controlled vocabulary

- Assigned to every article in the Medline subset of PubMed

- Hierarchical structure
  - Broaden or narrow searches

- Fewer false hits
Text word vs. controlled vocabulary (PubMed MeSH example)

- **Text words**
  - hip replacement
    - 30,673 results
- **Conversational phrase**
  - adverse effects of hip replacement
    - 9,467 results
- **Subject Headings (thesaurus, subjects, heading, MeSH)**
  - Arthroplasty, Replacement, Hip/adverse effects
    - 5,633 results
    - “major mesh” major topic of article: 3,924

Abstract
An apparent association between radiation exposure and noncancer respiratory diseases (NCRD) in the Life Span Study (LSS) of atomic bomb survivors has been reported, but the biological validity of that observation is uncertain. This study investigated the possibility of radiation causation of noncancer respiratory diseases in detail by examining subtypes of noncancer respiratory diseases, temporal associations, and the potential for misdiagnosis and other confounding factors. A total of 5,515 NCRD diagnoses listed as the underlying cause of death on the death certificate were observed among the 86,611 LSS subjects with estimated weighted absorbed lung doses. Radiation dose-response analyses were conducted using Cox proportional hazard regression for pneumonia/influenza, other acute respiratory infections, chronic obstructive pulmonary disease, and asthma. The linear excess relative risk at 1 gray (Gy) for pneumonia/influenza, which accounted for 63% of noncancer respiratory disease deaths, Adjustments for lifestyle and socioeconomic variations had a minimal impact on the risk estimates. However, adjustments for indications of cancer and cardiovascular disease decreased the estimated risk with ERR for total noncancer respiratory diseases declining by 35% from 0.17 to 0.11. Although it was impossible to fully adjust for the misdiagnosis of other diseases in these respiratory diseases deaths in this study because of limitations of available data, nevertheless, the associations were reduced or eliminated by the adjustment that could be made. This helps demonstrate the association between noncancer respiratory diseases and radiation exposure in previous reports could be in part be attributed to coincident cancer and/or cardiovascular diseases.
Radiation exposure and the risk of mortality from noncancer respiratory diseases in the life span study, 1950-2005.

Abstract
An apparent association between radiation exposure and noncancer respiratory diseases (NCRD) in the Life Span Study (LSS) of atomic bomb survivors has been reported, but the biological validity of that observation is uncertain. This study investigated the possibility of radiation causation of noncancer respiratory diseases in detail by examining subtypes of noncancer respiratory diseases, temporal associations, and the potential for misdiagnosis and other confounding factors. A total of 5,515 NCRD diagnoses listed as the underlying cause of death on the death certificate were observed among the 86,611 LSS subjects with estimated weighted absorbed lung doses. Radiation dose-response analyses were conducted using Cox proportional hazard regression for pneumonia/influenza, other acute respiratory infections, chronic obstructive pulmonary disease, and asthma. The linear excess relative risks (ERR) per gray (Gy) were 0.17 (95% CI 0.08, 0.27) for all NCRD and 0.20 (CI 0.09, 0.34) for pneumonia/influenza, which accounted for 63% of noncancer respiratory disease deaths. Adjustments for lifestyle and sociodemographic variations had almost no impact on the risk estimates. However, adjustments for indications of cancer and/or cardiovascular disease decreased the risk estimates, with ERR for total noncancer respiratory diseases declined by 35% from 0.17 to 0.11. Although it was impossible to fully adjust for the misdiagnosis of other diseases as noncancer respiratory diseases deaths in this study because of limitations of available data, nevertheless, the associations were reduced or eliminated by the adjustment that could be made. This helps demonstrates that the association between noncancer respiratory diseases and radiation exposure in previous reports could in part be attributed to coincident cancer and/or cardiovascular diseases.

- **Academic Search Premier**
  This multi-disciplinary database provides full text for more than 4,600 journals, including full text for nearly 3,900 peer-reviewed titles. PDF backfiles to 1975 or further are available for well over one hundred journals, and searchable cited references are provided for more than 1,000 titles.
  - Title List
  - More Information

- **CINAHL Plus with Full Text**
  CINAHL Plus® with Full Text is a robust collection of full text for nursing & allied health journals, providing full text for more than 770 journals indexed in CINAHL®. This authoritative file contains full text for many of the most used journals in the CINAHL index, with no embargo. CINAHL Plus with Full Text is the core research tool for all areas of nursing and allied health literature. Full text coverage dates back to 1937.
  - Title List
  - More Information

- **Health Source: Nursing/Academic Edition**
  This database provides nearly 550 scholarly full text journals focusing on many medical disciplines. Health Source: Nursing/Academic Edition also features the AHFS Consumer Medication Information, which covers 1,300 generic drug patient education sheets with more than 4,700 brand names.

Effectively Search a Database:

- Does it cover a relevant subject?
- How does it combine search terms?
- Does it have controlled vocabulary (thesaurus, subject headings, etc.)?
- What is the truncation symbol?
- What limits or filters are available?
- Read the “Help” info
Searching tips

- Keep a record of search terms used in each database
  - Your paper may have a section where you need to say what terms you searched and where you searched

- Truncation symbol, usually *
  - Mimic* retrieves mimic, mimics, mimicking

- Boolean: how to use AND, OR, NOT
  - AND: all words
  - OR: any of the words
  - NOT: exclude words (obesity prevention NOT diabetes)
Searching tips, continued

- Does database automatically “And”?

- Try different approaches to see different results: nurse–patient communication VS nurses AND communication

- Use parentheses to force phrases
  - “mass hysteria” vs. mass hysteria
Steps in a Literature Search

1. Choose a topic
2. Search for potential references.
3. Retrieve and save relevant citations and/or full text of relevant results
4. Check references in relevant articles for new potential references
5. Organize references
6. Analyze & Synthesize: integrate notes, references, etc.
7. Write your paper, lit review, etc.
